## Projects

---

BANKING MANAGEMENT SYSTEM | JDBC CONNECTIVITY

This project is based on Banking management system that was created using JDBC connectivity, which helps people for easy transaction , credit , debit .

## ONLINE CLOTHING SYSTEM | WEB DEVELOPMENT

This web application was developed for the customers to swipe their pre-owned clothes in our website and also to buy new customized clothes from it. This web application was developed using HTML CSS Javascript for front-end and we used PHP for Back-end. By using this website people can easily exchange their clothes for new ones. They can also customize the minute details in their new clothes according to their wishes.

## PET PRODUCTS | E-COMMERCE WEBSITE

This web application was based on mern stack. As a part of our internship we did this project. This web application was developed particularly buying pet products from it. This web application comprises of HTML CSS and JavaScript which includes Re-act.js and node.js we also used Express.js in it where these all comes under front-end. And for Back-end we used MongoDB.
